simplified finite element methods for finite deformation post buckling analysis of large space trusses and space frames are presented arbitrarily large rigid translations and rigid rotations of each member are accounted for each 3 d truss member is assumed to withstand an axial force while each 3 d frame member is assumed to withstand two bending moments a twisting moment and transverse and axial forces at each node the influence of local member buckling on global instability is systematically examined for both 3 d truss and frame members explicit tangent stiffness matrices are derived by explicit it is meant that no element wise basis functions are assumed and that no element wise numerical integrations are involved these explicit tangent stiffness matrices are very simply evaluated at any point in the load deformation history of a space truss or space frame undergoing large deformations as well as in the post buckled region of behavior of these structures an arc length method is implemented to trace the post buckling behavior of these large space structures a large number of examples are included to 1 bring out the economy as well as accuracy of the simplified method developed 2 indicate the effectiveness of the present method in creating reduced order models of large space structures and 3 delineate the process whereby the overall behavior of the structure can be vastly improved by controlling the deformation of individual members through active or passive mechanisms keywords reduced order model simplified nonlinear analysis finite deformations finite rotations semi tangential rotations exact tangent stiffness matrix lss large space structure control arc length method

during the past two decades professional interest in terminal care has increased dramatically it is always difficult to trace the origins of a change of emphasis in medical and nursing care but it is likely that three influences have contributed to bring this about firstly the rise of the modern hospice movement with its recognition that dying and

mourning are normal life events and that the lay person has a role in these events no less important than the health professional secondly the development of sophisticated and successful techniques of palliative care and pain control and lastly the increasing expectations of the populace in advanced countries for a comprehensive and sensitive service for patients family and care givers at the terminal phase of illness it is significant that these developments in the care and management of the terminally ill are not confined either to one country or the sole prerogative of a single discipline this is reflected in the papers collected in this volume which were originally presented at the international conference on multidisciplinary aspects of terminal care organised by the prince and princess of wales hospice in glasgow scotland u k the cross fertilisation of ideas experiences and assessments provided by the contributors in a multicultural and multidisciplinary context presented in this volume will be found stimulating and inspirational for both the professional and the lay person in the care of the dying

continuing the best selling tradition of the handbook of structural engineering this second edition is a comprehensive reference to the broad spectrum of structural engineering encapsulating the theoretical practical and computational aspects of the field the contributors cover traditional and innovative approaches to analysis design and rehabilitation new topics include fundamental theories of structural dynamics advanced analysis wind and earthquake resistant design design of prestressed structures high performance steel concrete and fiber reinforced polymers semirigid frame structures structural bracing and structural design for fire safety
